

**INCIDENT MANAGEMENT SITUATION REPORT  
SUNDAY, JANUARY 1, 2006 – 1000 MST  
NATIONAL PREPAREDNESS LEVEL 1**

**CURRENT SITUATION:**

Initial attack activity was light nationally with 6 new fires reported. Three new large fires were reported, and three were contained in the Southern Area. Very high to extreme fire indices were reported in Texas and Oklahoma.

**SOUTHERN AREA INCIDENTS/LARGE FIRES:**

NORTH CENTRAL TEXAS IA, Texas Forest Service. A Unified Command between a Type 1 Incident Management Team (Quesinberry) and a Type 2 Incident Commander (Hannemann), representing the state of Texas, is in place in Granbury, TX. The Unified Command will assist local resources in managing existing fires and initial attack within the established 220,000 square mile response area in Texas. Three fires for 37 acres were controlled within the response area yesterday. Size and cost figures in the table represent cumulative fire activity to date for the response area.

SHERWOOD, Wewoka Agency, Bureau of Indian Affairs. This fire is five miles south of Wewoka, OK in grass and timber. Two outbuildings were destroyed. Extreme fire behavior was observed. Air tankers aided suppression efforts. Containment lines have been secured.

DUCK HEAD, Buffalo National River, National Park Service. This fire is near Cozahoma, AR in a designated wilderness area. Residences, infrastructure and businesses are potentially threatened. No further information was received.

PINE SPRINGS, Oklahoma Division of Forestry. This fire is ten miles north of Centerpoint, OK in grass and understory. The fire is currently in patrol status.

OKS – Oklahoma Division of Forestry

## OUTLOOK:

**Weather Discussion:** A weather system moving across Southern Plains will bring warm, dry and very windy conditions today to eastern New Mexico, Texas and Oklahoma as well as southern portions of Kansas and Missouri. The dry, windy conditions should moderate some on Monday.

## HYDRATION

Studies conducted on wildland firefighters indicate that fire suppression activities generate about 7.5 kilocalories of heat each minute worked, or 450 kilocalories for each hour. Additional heat (about 180 kilocalories per hour) comes from the environment and the fire. The total heat load amounts to 580 kilocalories per hour (400 + 180 = 580). Complete evaporation of 1 liter of sweat removes 580 kilocalories of heat. In order to maintain a healthy body temperature, the firefighter needs to evaporate about 1 liter (slightly more than 1 quart) of sweat during each hour of work.

- Maintaining body fluids is essential for sweating. You must hydrate before, during, and after work.
- Before work you should take extra fluids to prepare for the heat. Drink 1 or 2 cups of water, juice, or a sport drink before work. Avoid excess caffeine; it hastens fluid loss in the urine.
- While working drink at least 1 quart of fluid per hour. Drink as much as you can during the lunch break. Water is your greatest need during work in the heat.
- Providing a portion of fluid replacement with a carbohydrate/electrolyte sport beverage will help you retain fluids and maintain energy and electrolyte levels.
- After work it is important to continue drinking to replace fluid losses. Thirst always underestimates fluid needs, so you should drink more than you think you need.
- Rehydration is enhanced when fluids contain sodium and potassium, or when foods with these electrolytes are consumed along with the fluid.
- Unacclimatized workers lose more salt in the heat so they need to pay particular attention to salt replacement. Don't overdo salt intake; too much salt impairs temperature regulation. Excessive salt can cause stomach distress, fatigue, and other problems.
- Make potassium-rich foods like bananas and citrus fruits a regular part of your diet, and drink lots of lemonade, orange juice, or tomato juice.
- Limit the amount of caffeine drinks such as coffee and colas because caffeine increases fluid loss. Avoid alcoholic drinks. They also cause dehydration.
- You can assess your hydration by observing the volume, color, and concentration of your urine. Low volumes of dark, concentrated urine, or painful urination indicate a serious need for rehydration. Other signs of dehydration include a rapid heart rate, weakness, excessive fatigue, and dizziness.
- Rapid loss of several pounds of body weight is a certain sign of dehydration. Rehydrate before returning to work; continuing to work in a dehydrated state can lead to serious consequences, including heat stroke, muscle breakdown, and kidney failure.
